

Water Supply Master Plan Update

OVERVIEW

Water Supply Master Plan Update

- Will define where and how the City gets its safe and reliable water – for residential and industrial use – over the next 25 years
- We'll review Guelph's existing water supply and discuss with the community how to continue to meet the City's needs
- Additional sources to supplement our existing supply will be identified. As will alternative ways to conserve supply and manage demands.
- When investigating existing and new water supply options—like new groundwater sources in and outside of the City and local surface water sources—we'll consider things like population growth, climate change, water quality and quantity, economic factors, and any relevant regulations
- Regardless of source, our water supply will continue to meet the service requirements of Guelph and the high standards set by the MOE
- Short-term, mid-term and long-term water supply options will be recommended

Master Planning Process
