 38 Winer Rd, Puslinch

Founded in Cambridge in 1996 as Tricity Automation Inc., TCA Technologies is celebrating 30 years of innovation in custom industrial automation. The company moved to Puslinch in 1999, drawn by its central location and convenient access to Highway 401, surrounding communities and major transportation networks. As its services, technologies and international customer base expanded, the business grew into TCA Technologies, serving manufacturers across Canada and around the world.

TCA designs and manufactures equipment for a wide range of industries, including automotive, energy, health sciences, agrifood, construction and consumer products. Its capabilities span robotics, assembly systems, material handling, automated inspection and testing, and complete manufacturing of plating lines. Every system is developed to address a customer's specific manufacturing challenge. By working closely with customers from concept through installation and ongoing support, TCA helps manufacturers improve worker safety, product quality, production efficiency and competitiveness.

Despite its global reach, TCA places considerable value on local relationships and face-to-face collaboration. Its multidisciplinary, multicultural team includes engineers, designers, technicians, electricians and skilled tradespeople who live throughout the region, with some just minutes from its Puslinch facility. Through co-op placements, apprenticeships and a broad range of career opportunities, TCA helps develop the next generation of manufacturing talent. The company also supports local charitable organizations and community initiatives, recognizing that investing in people and supporting the regional economy helps build a stronger community for everyone.
